

# Wireless Tactical OTAR Now Available on RELM KNG Series Portables

## Key Benefits of Wireless Tactical OTAR

Wireless Tactical OTAR (WTO) capable KNG Series radios provide end users the flexibility to update encryption keys without ancillary equipment, infrastructure or Key Management Facilities. WTO operates radio-to-radio and is completely contained in the KNG radio units, no additional equipment is required beyond initialization. Users in the field benefit through simple and secure transfer of encryption keys to other authorized units. WTO provides the lowest cost of entry for OTAR and is ideal for task group operations and as a cost effective solution for small agencies. WTO is compatible with existing repeater networks and is fully complimentary with fielded OTAR/KMF Infrastructure systems.

## Key Features of KNG Series Radios

- Up to 6W Transmit for Max Range/Building Penetration
- Optimized Receiver Mitigates Interference
- 16 oz. with Battery
- NTIA and FCC Narrowband
- Mil-STD-810-C/D/E/F
- DES and AES Encryption
- NIST FIPS-140-2 Validated
- Over The Air Rekey (OTAR)
- KVL-3000+ Compatible
- Wireless Tactical OTAR Allows Rekey Without KMF Infrastructure
- Project 25 Compliant
- Improved Audio Quality with Enhanced Full Rate Vocoder
- Mixed Mode - Analog/Digital
